

FORMAT TUGAS LAPORAN PRAKTIKUM

A. Mata Praktikum	Workshop Sistem Informasi Web Framework		Foto 3x4 
B. Dosen Pengampu	David Juli Ariyadi, S.Kom., M.Kom		
C. Pokok Bahasan	Middleware,Authentikasi, dan Authorization		
D. Nama Lengkap	Eldison Di Gadja		
E. NIM	E44253366	NILAI	
F. Golongan / Kelas	B		
G. Minggu / Pertemuan	6		

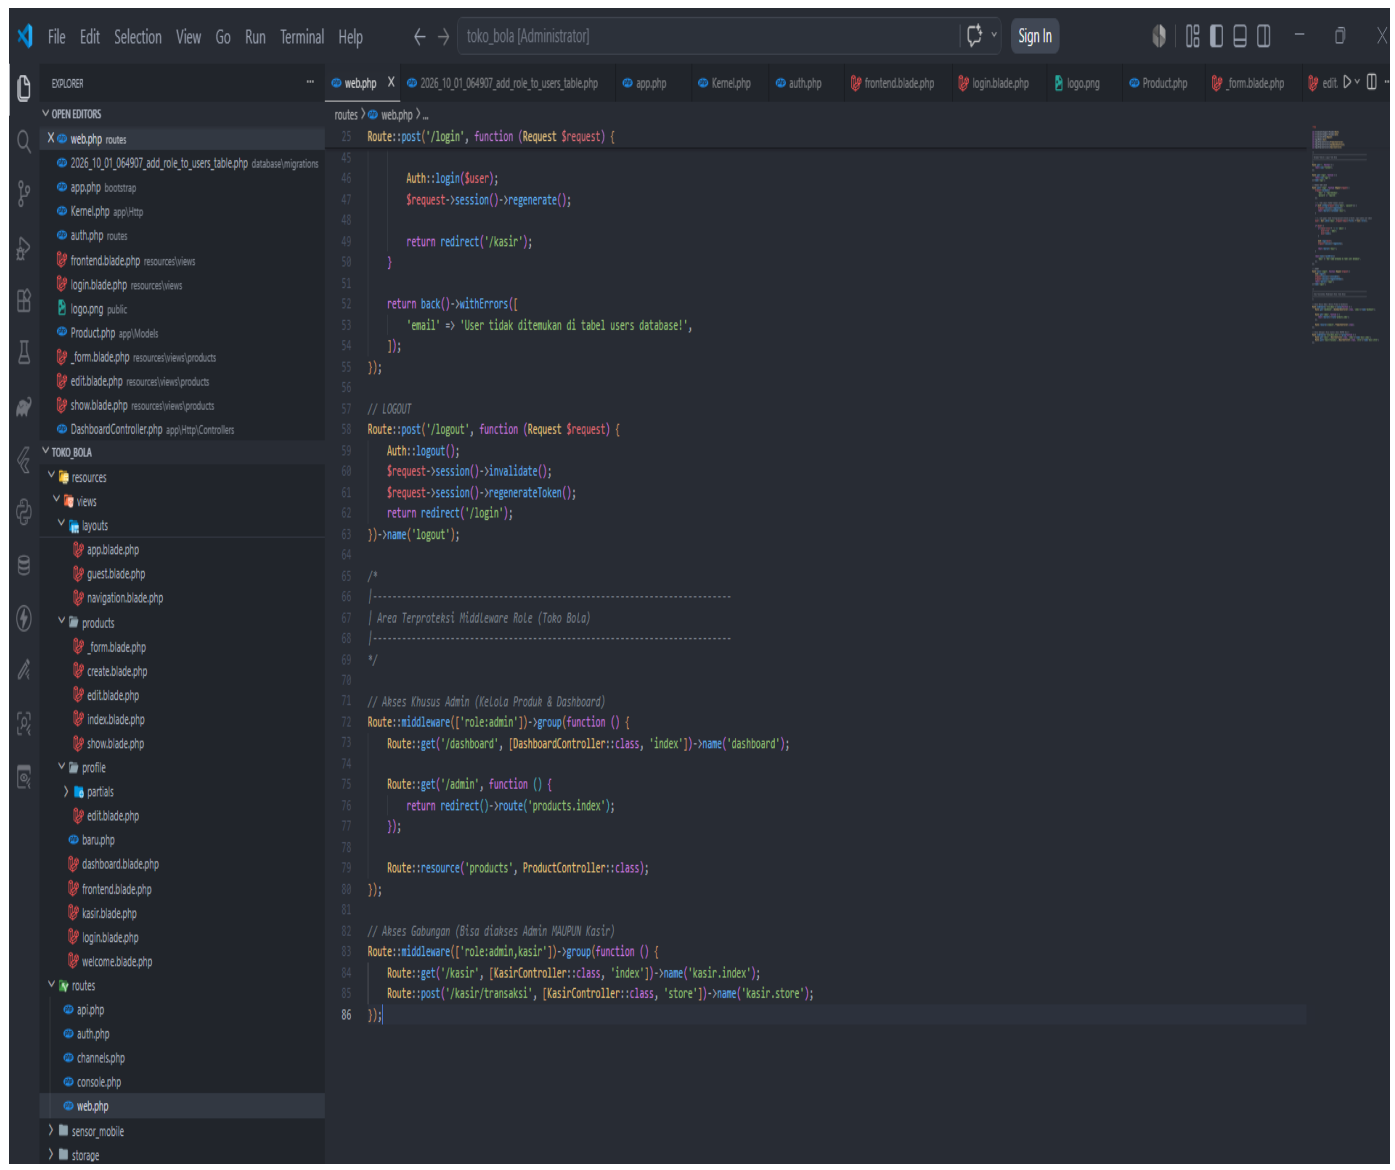

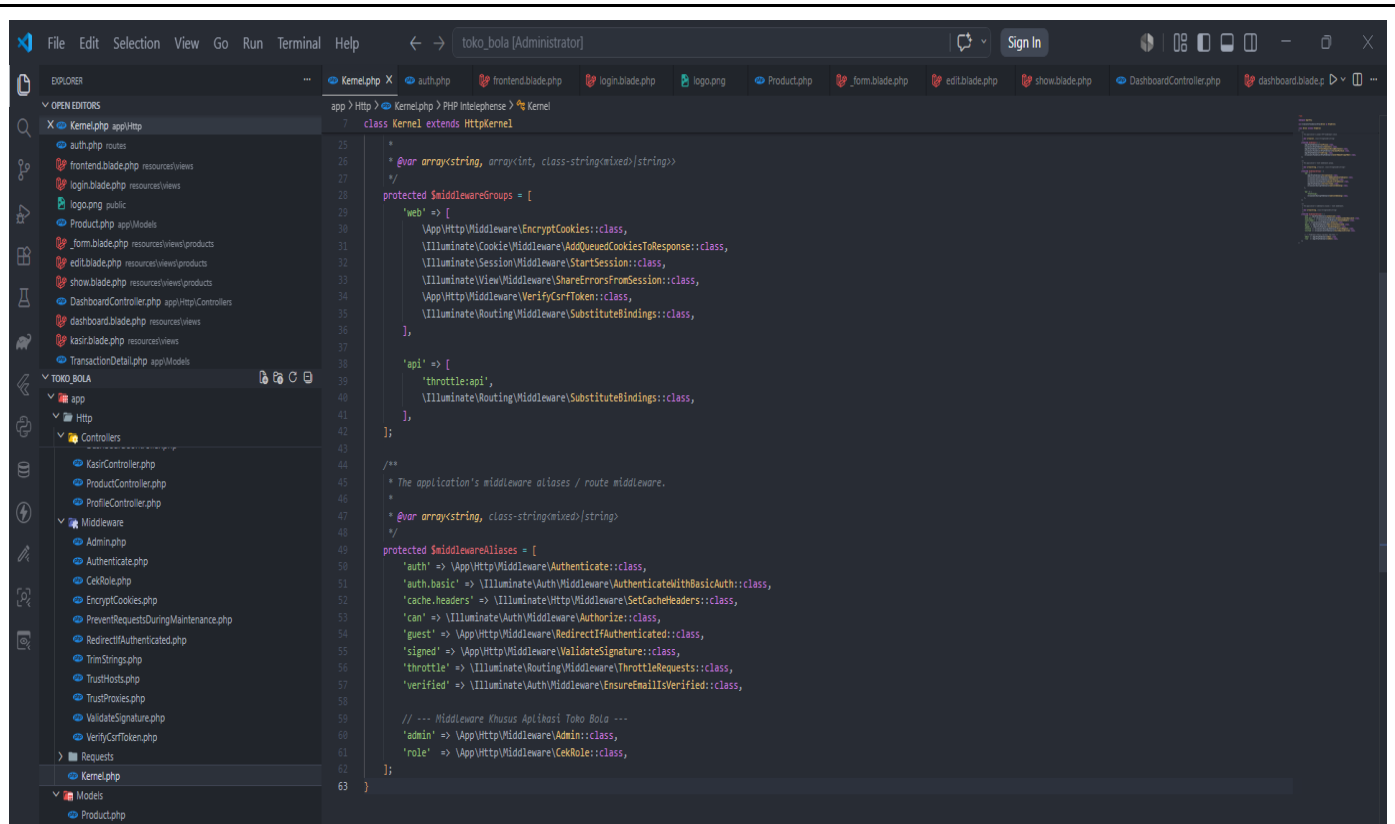

H. Kode Program

Masukkan screenshot kode program gunakan background theme putih

```
app > Http > Middleware > CekRole.php > PHP Intelephense > CekRole

J. Penjelasan

Jelaskan secara singkat langkah-langkah dari tugas praktikum yang dikerjakan

Penjelasan Middleware, Authentication, & Authorization

- **Authentication (Otentikasi)**
 - **Fungsi:** Memastikan identitas pengguna ("Siapa Anda?").
 - **Penerapan:** Menguji email & password via `Auth::attempt()`, mengelola sesi login, dan mengamankan password menggunakan `Hash::make()`.
- **Authorization (Otorisasi)**
 - **Fungsi:** Memeriksa hak akses pengguna ("Apa yang boleh Anda lakukan?").
 - **Penerapan:** Membedakan akses berdasarkan peran (RBAC: admin vs kasir), memvalidasi kepemilikan data via `PostPolicy/Gate` (user hanya bisa mengedit postingannya sendiri), dan menampilkan elemen UI secara dinamis menggunakan direktori Blade `@can`.
- **Middleware**
 - **Fungsi:** Penyaring (*filter*) HTTP request sebelum mencapai *Controller*.
 - **Penerapan:** Middleware auth mengalihkan user belum login ke `/login`, middleware role membatasi rute khusus admin/kasir, dan middleware `can` memblokir akses langsung via URL (menghasilkan error 403 Forbidden jika tidak berhak).

Alur Kerja Ringkas

Request → Middleware → Authentication → Authorization → Controller/View

1. **Middleware:** Menjaga pintu masuk rute.
2. **Authentication:** Memastikan pengguna sudah login.
3. **Authorization:** Memastikan pengguna punya izin terhadap data/fitur tersebut.

K. Kesimpulan

Beri kesimpulan dari laporan praktikum yang dikerjakan

Kombinasi **Authentication**, **Authorization**, dan **Middleware** menciptakan sistem keamanan multi-lapis (*Defense in Depth*) pada aplikasi Toko Bola. **Authentication** memverifikasi identitas pengguna, **Authorization** mengatur batasan aksi/data yang boleh diakses, dan **Middleware** bertindak sebagai penjaga rute di tingkat sistem. Hasilnya, aplikasi aman dari penembakan URL langsung, memiliki antarmuka yang adaptif sesuai hak akses, serta memiliki struktur kode yang rapi dan terisolasi.
